

Introducing Covid Manager

FORTX

Secure your fort

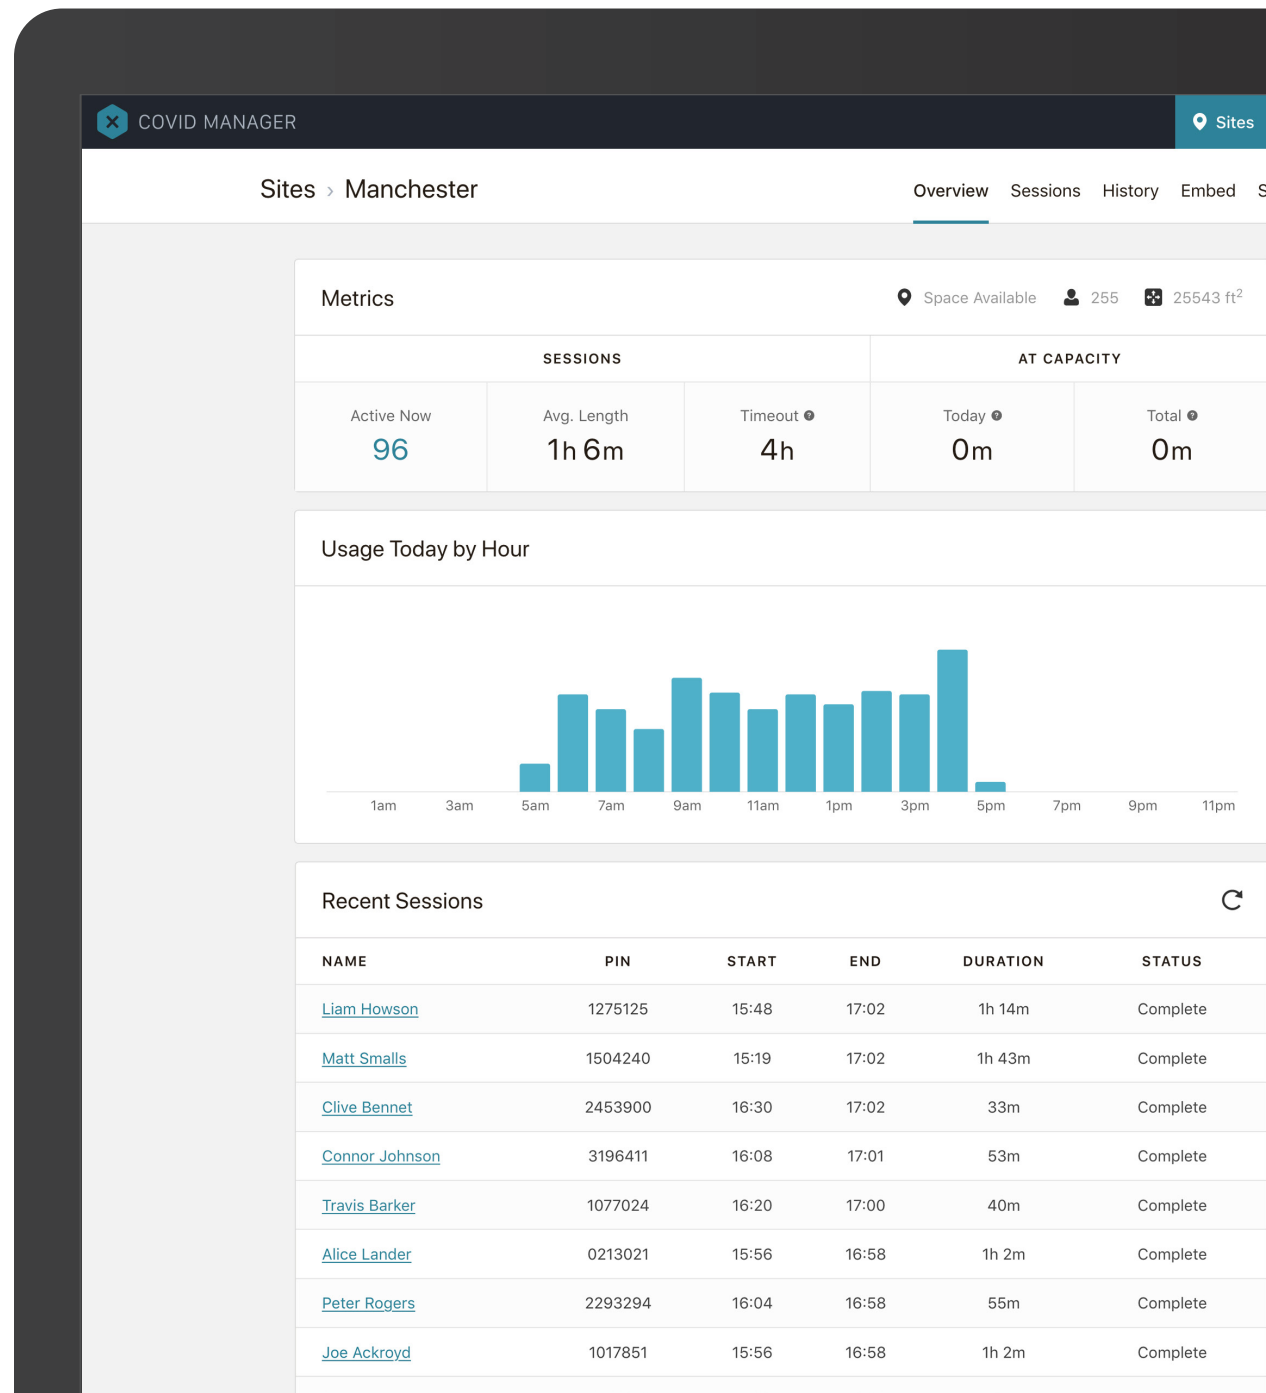

01

Securing your fort during the COVID-19 crisis

Covid Manager has been developed to help businesses operate in a COVID-19 Secure manner.

Covid Manager is feature rich addition to the Fortx platform, which is a cloud-based access control solution designed to keep your premises, staff and customers safe.

In the health club industry, Fortx provides a real-time distribution system that is synchronised to the member management system and the physical access control hardware on-site.

02

Capacity Management

Social distancing is a key part of the operating requirements necessary to manage the spread of COVID-19. This starts with capacity management.

Fortx allows customers to set a capacity for each of their premises via the Covid Manager dashboard; based on property size and a configurable COVID-19 distancing guideline to be enforced.

03

Dynamic Access Control

When capacity is reached, members will not be able to enter the facility until another member has exited.

Fortx automatically manages access for members based on the capacity set for COVID-19 Secure purposes, as well as the usual business logic that ensures only valid members have access entitlements. Fortx operates on a real-time basis thereby freeing up your staff to undertake other value adding activities.

04

Occupancy Reporting

Fortx provides real-time occupancy data for each site that helps customers manage their business.

Customers may also wish to advertise the headline occupancy level to their members (via their website, member management system or mobile app for example) so they know whether it is a good time to attend.

CURRENT OCCUPANCY

43%

FORTX

05

Trace

Easily trace individuals that were in the premises with a suspected or infected person.

Covid Manager is Test and Trace compliant out of the box. Detailed access data means businesses can easily identify members who may have been in contact with a suspected or infected individual that has attended a particular facility.
